## A RESTRUCTURING SUCCESS STORY

### BUSINESS CHALLENGE

#### High Growth Leads To Doubled Business Costs – Create Scale Successfully

The client—one of North America's largest energy and energy-related services providers – was concerned that the high growth they were experiencing due to organic and inorganic business strategies was about to double the cost of their finance organization. They needed to create scale across the organization as quickly and efficiently as possible. The CFO needed tried and true star power to get things on track and lay the foundation for scalability moving forward.

Focused on Sirius Solutions' value-based consulting approach and over two decades of expertise in M&A scale and integration for large corporations, the lead partner for this effort elected Sirius Solutions to deliver an optimized finance organization.

### CUSTOM SOLUTION

The Sirius Solutions' Restructuring Solutions team partnered to benchmark the client's finance organization. Our team members were key advisors during the evaluation process and provided recommendations on strategic vs non-strategic areas of focus for the finance and accounting organization. Five implementation plans were developed and rolled out to create scale in acquisition integration, financial planning and analysis, finance technology, management reporting, and procure to pay.

An implementation program was completed within six months.

Our innovative proprietary approach, combined with our specialized industry expertise in energy, financial operations, process improvement, technology infrastructure, IT operations, master data, ERP, and specialized business systems for unique functions, enabled us to develop a process in which we achieved swift results.

### IMPACTFUL RESULTS

#### Create Scale For Business Growth

- Finance and Accounting organization was centralized with strategic objectives established.
- Total cost of finance organization was limited to 23% growth.
- 10x ROI
